<p><u>Mit'kevich, G. P.</u> THE RELATIONSHIP BETWEEN FROTHING PROPERTIES AND THE SIZES OF BUBBLES. [1960] [5]p. 9 refs. Warren Spring Lab. Trans. NT739; M1347. Order from LC or SLA m\$1.80, ph\$1.80 60-17182  Trans. of Zhurn[al] Priklad[noy] Khim[ii] (USSR) 1948, v. 21, no. 8, p. 816-819.  An optical method is suggested for studying the dynamics of the formation and disintegration of the mass of froth as a whole. For a given frother and selected operating conditions a definite range exists, which contains the bubble size with the highest stability. A study is made of the kinetics of changes in the excess pressure inside the bubbles during formation and disintegration of the froth.
